

Description:

System dividing walls are used on the inside of buildings as non-bearing walls to separate spaces for storerooms, parking spaces in multi-storey garages or to enclose areas in industrial warehouses. Thanks to the small spacing between the slats (approx. 35 mm), the wall provides the optimum balance between maintaining the privacy of the users and ensuring adequate ventilation of the rooms.

Characteristics/colour:

Zinc plating

AESTHETICS - SAFETY

PADLOCK HOLDERS

HOOK BOLTS (OPTIONALLY)

CORNER PROTECTION

Partition height:

Standard: 2200 mm, 2200 mm, 2400 mm

Opening height:

Standard: 2000 mm
